## **CLAIMS:**

## We claim:

- 1. A catalyst composition, comprising:
  - (a) a molecular sieve;
  - (b) a matrix material containing less than about 10,000 wppm iron and iron-containing species, based on the total weight of the matrix material; and
  - (c) optionally binder.
- 2. The composition of claim 1, wherein the matrix material contains less than about 7,000 wppm iron and iron-containing species, based on the total weight of the matrix material.
- 3. The composition of claim 2, wherein the matrix material contains less than about 4,000 wppm iron and iron-containing species, based on the total weight of the matrix material.
- 4. The composition of claim 1, wherein the matrix material is selected from the group consisting of: kaolin, halloysite, kaolinite, dickite, nacrite, hectorite and laponite.
- 5. The composition of claim 1, wherein the catalyst composition has a d<sub>50</sub> particle size from about 20 to about 200 microns.
- 6. The composition of claim 1, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof and mixtures thereof.

- 7. The composition of claim 6, wherein the molecular sieve is selected from the group consisting of SAPO-34, AEI/CHA intergrowths, the metal containing forms thereof, and mixtures thereof.
- 8. The composition of claim 1, wherein the catalyst composition is a slurry, said catalyst composition further comprising:
  - (d) a slurrying medium.
- 9. A catalyst composition, comprising:
  - (a) a molecular sieve;
  - (b) a matrix material containing less than about 15,000 wppm titanium and titanium-containing species, based on the total weight of the matrix material; and
  - (c) optionally binder.
- 10. The composition of claim 9, wherein the matrix material contains less than about 10,000 wppm titanium and titanium-containing species, based on the total weight of the matrix material.
- 11. The composition of claim 10, wherein the matrix material contains less than about 5,000 wppm titanium and titanium-containing, based on the total weight of the matrix material.
- 12. The composition of claim 9, wherein the matrix material is selected from the group consisting of: kaolin, halloysite, kaolinite, dickite, nacrite, montmorillonite, saponite, hectorite and laponite.
- 13. The composition of claim 9, wherein the catalyst composition has a d<sub>50</sub> particle size from about 20 to about 200 microns.
- 14. The composition of claim 9, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-

- 17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof, and mixtures thereof.
- 15. The composition of claim 14, wherein the molecular sieve is selected from the group consisting of SAPO-34, AEI/CHA intergrowths, the metal containing forms thereof, and mixtures thereof.
- 16. The composition of claim 9, wherein the catalyst composition is a slurry, said catalyst composition further comprising:
  - (d) a slurrying medium.
- 17. A catalyst composition, comprising:
  - (a) a molecular sieve;
  - (b) a matrix material containing less than about 1,500 wppm nickel and nickel-containing species, based on the total weight of the matrix material; and
  - (c) optionally binder.
- 18. The composition of claim 17, wherein the matrix material contains less than about 300 wppm nickel and nickel-containing species, based on the total weight of the matrix material.
- 19. The composition of claim 18, wherein the matrix material contains less than about 150 wppm nickel and nickel-containing species, based on the total weight of the matrix material.
- 20. The composition of claim 17, wherein the matrix material is selected from the group consisting of: kaolin, halloysite, kaolinite, dickite, nacrite, montmorillonite, hectorite, saponite and laponite

- 21. The composition of claim 17, wherein the catalyst composition has a d<sub>50</sub> particle size from about 20 to about 200 microns.
- 22. The composition of claim 17, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof, and mixtures thereof.
- 23. The composition of claim 22, wherein the molecular sieve is selected from the group consisting of SAPO-34, AEI/CHA intergrowths, the metal containing forms thereof, and mixtures thereof.
- 24. The composition of claim 17, wherein the catalyst composition is a slurry, said catalyst composition further comprising:
  - (d) a slurrying medium.
- 25. A catalyst composition, comprising:
  - (a) a molecular sieve;
  - (b) a matrix material containing less than about 1,500 wppm cobalt and cobalt-containing species, based on the total weight of the matrix material; and
  - (c) optionally binder.
- 26. The composition of claim 25, wherein the matrix material contains less than about 100 wppm cobalt and cobalt-containing species, based on the total weight of the matrix material.
- 27. The composition of claim 26, wherein the matrix material contains less than about 5 wppm cobalt and cobalt-containing species, based on the total weight of the matrix material.

- 28. The composition of claim 25, wherein the matrix material is selected from the group consisting of: kaolin, halloysite, kaolinite, dickite, nacrite, montmorillonite, hectorite, saponite and laponite.
- 29. The composition of claim 25, wherein the catalyst composition has a  $d_{50}$  particle size from about 20 to about 200 microns.
- 30. The composition of claim 25, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof, and mixtures thereof.
- 31. The composition of claim 30, wherein the molecular sieve is selected from the group consisting of SAPO-34, AEI/CHA intergrowths, the metal containing forms thereof, and mixtures thereof.
- 32. The composition of claim 25, wherein the catalyst composition is a slurry, said catalyst composition further comprising:
  - (d) a slurrying medium.
- 33. A process for forming a molecular sieve catalyst composition, the process comprising the steps of:
  - (a) selecting a matrix material containing less than 10,000 wppm of iron and iron-containing species, based on the total weight of the matrix material;
  - (b) forming a slurry containing the matrix material, a molecular sieve, a slurrying medium, and optionally a binder; and
  - (c) drying the slurry to produce the molecular sieve catalyst composition.

- 34. The process of claim 33, wherein the matrix material contains less than 7,000 wppm of iron and iron-containing species, based on the total weight of the matrix material.
- 35. The process of claim 34, wherein the matrix material contains less than 4,000 wppm of iron and iron-containing species, based on the total weight of the matrix material.
- 36. The process of claim 33, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof, and mixtures thereof.
- 37. A process for forming a molecular sieve catalyst composition, the process comprising the steps of:
  - (a) selecting a matrix material containing less than 15,000 wppm of titanium and titanium-containing species, based on the total weight of the matrix material;
  - (b) forming a slurry containing the matrix material, a molecular sieve, a slurrying medium, and optionally a binder; and
  - (c) drying the slurry to produce the molecular sieve catalyst composition.
- 38. The process of claim 37, wherein the matrix material contains less than 10,000 wppm of titanium and titanium-containing species, based on the total weight of the matrix material.
- 39. The process of claim 38, wherein the matrix material contains less than 5,000 wppm of titanium and titanium-containing species, based on the total weight of the matrix material.

- 40. The process of claim 37, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof, and mixtures thereof.
- 41. A process for forming a molecular sieve catalyst composition, the process comprising the steps of:
  - (a) selecting a matrix material containing less than 1,500 wppm of nickel and nickel-containing species, based on the total weight of the matrix material;
  - (b) forming a slurry containing the matrix material, a molecular sieve, a slurrying medium, and optionally a binder; and
  - (c) drying the slurry to produce the molecular sieve catalyst composition.
- 42. The process of claim 41, wherein the matrix material contains less than 300 wppm of nickel and nickel-containing species, based on the total weight of the matrix material.
- 43. The process of claim 42, wherein the matrix material contains less than 150 wppm of nickel and nickel-containing species, based on the total weight of the matrix material.
- 44. The process of claim 41, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof, and mixtures thereof.

- 45. A process for forming a molecular sieve catalyst composition, the process comprising the steps of:
  - (a) selecting a matrix material containing less than 1,500 wppm of cobalt and cobalt-containing species, based on the total weight of the matrix material;
  - (b) forming a slurry containing the matrix material, a molecular sieve, a slurrying medium, and optionally a binder; and
  - (c) drying the slurry to produce the molecular sieve catalyst composition.
- 46. The process of claim 45, wherein the matrix material contains less than 100 wppm of cobalt and cobalt-containing species, based on the total weight of the matrix material.
- 47. The process of claim 46, wherein the matrix material contains less than 5 wppm of cobalt and cobalt-containing species, based on the total weight of the matrix material.
- 48. The process of claim 45, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof, and mixtures thereof.
- 49. A process for producing light olefins, the process comprising the steps of:
  - (a) providing an oxygenate in an oxygenate-containing feedstock; and
  - (b) contacting the oxygenate with a molecular sieve catalyst composition under conditions effective to convert at least a portion of the oxygenate to light olefins and oxygenate byproducts in a reaction effluent,

- wherein the reaction effluent contains less than about 10 weight percent oxygenate byproducts, based on the total weight of the reaction effluent.
- 50. The process of claim 49, wherein the reaction effluent contains less than about 5 weight percent oxygenate byproducts, based on the total weight of the reaction effluent.
- 51. The process of claim 50, wherein the reaction effluent contains less than about 3 weight percent oxygenate byproducts, based on the total weight of the reaction effluent.
- 52. The process of claim 51, wherein the reaction effluent contains less than about 1 weight percent oxygenate byproducts, based on the total weight of the reaction effluent.
- 53. The process of claim 49, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 10,000 wppm of iron and iron-containing species, based on the total weight of the matrix material.
- 54. The process of claim 53, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 7,000 wppm of iron and iron-containing species, based on the total weight of the matrix material.
- 55. The process of claim 54, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 4,000 wppm of iron and iron-containing species, based on the total weight of the matrix material.
- 56. The process of claim 49, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 15,000

- wppm of titanium and titanium-containing species, based on the total weight of the matrix material.
- 57. The process of claim 56, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 10,000 wppm of titanium and titanium-containing species, based on the total weight of the matrix material.
- 58. The process of claim 57, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 5,000 wppm of titanium and titanium-containing species, based on the total weight of the matrix material.
- 59. The process of claim 49, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 1,500 wppm of nickel and nickel-containing species, based on the total weight of the matrix material.
- 60. The process of claim 59, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 300 wppm of nickel and nickel-containing species, based on the total weight of the matrix material.
- 61. The process of claim 60, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 150 wppm of nickel and nickel-containing species, based on the total weight of the matrix material.
- 62. The process of claim 49, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 1,500 wppm of cobalt and cobalt-containing species, based on the total weight of the matrix material.

- 63. The process of claim 62, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 100 wppm of cobalt and cobalt-containing species, based on the total weight of the matrix material.
- 64. The process of claim 63, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 5 wppm of cobalt and cobalt-containing species, based on the total weight of the matrix material.
- 65. The process of claim 49, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 1,500 wppm of manganese and manganese-containing species, based on the total weight of the matrix material.
- 66. The process of claim 65, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 300 wppm of manganese and manganese-containing species, based on the total weight of the matrix material.
- 67. The process of claim 66, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 150 wppm of manganese and manganese-containing species, based on the total weight of the matrix material.
- 68. The process of claim 49, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 1,500 wppm of vanadium and vanadium-containing species, based on the total weight of the matrix material.

- 69. The process of claim 68, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 300 wppm of vanadium and vanadium-containing species, based on the total weight of the matrix material.
- 70. The process of claim 69, wherein the molecular sieve catalyst composition contains a matrix material, the matrix material containing less than 150 wppm of vanadium and vanadium-containing species, based on the total weight of the matrix material.
- 71. The process of claim 49, wherein the molecular sieve catalyst composition contains a matrix material selected from the group consisting of: rare earth metals, non-active metal oxides including zirconia, magnesia, thoria, beryllia, quartz, silica, or sols, silica-magnesia, silica-zirconia, silica-alumina, silica-alumina-thoria, synthetic clays, montmorillonite, kaolinite, halloysite, dickite, nacrite, anauxite, laponite, and synthetic mica montmorillonites.
- 72. The process of claim 49, wherein the molecular sieve catalyst composition contains a molecular sieve selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof, and mixtures thereof.
- 73. The process of claim 72, wherein the molecular sieve is selected from the group consisting of SAPO-34, AEI/CHA intergrowths, the metal containing forms thereof, and mixtures thereof.
- 74. The process of claim 49, wherein the molecular sieve catalyst composition comprises less than 10,000 wppm of iron and iron-containing species, based on the total weight of the molecular sieve catalyst composition.

- 75. The process of claim 74, wherein the molecular sieve catalyst composition comprises less than 7,000 wppm of iron and iron-containing species, based on the total weight of the molecular sieve catalyst composition.
- 76. The process of claim 75, wherein the molecular sieve catalyst composition comprises less than 4,000 wppm of iron and iron-containing species, based on the total weight of the molecular sieve catalyst composition.
- 77. The process of claim 49, wherein the molecular sieve catalyst composition comprises less than 15,000 wppm of titanium and titanium-containing species, based on the total weight of the molecular sieve catalyst composition.
- 78. The process of claim 77, wherein the molecular sieve catalyst composition comprises less than 10,000 wppm of titanium and titanium-containing species, based on the total weight of the molecular sieve catalyst composition.
- 79. The process of claim 78, wherein the molecular sieve catalyst composition comprises less than 5,000 wppm of titanium and titanium-containing species, based on the total weight of the molecular sieve catalyst composition.
- 80. The process of claim 49, wherein the molecular sieve catalyst composition comprises less than 1,500 wppm of nickel and nickel-containing species, based on the total weight of the molecular sieve catalyst composition.
- 81. The process of claim 80, wherein the molecular sieve catalyst composition comprises less than 300 wppm of nickel and nickel-containing species, based on the total weight of the molecular sieve catalyst composition.

- 82. The process of claim 81, wherein the molecular sieve catalyst composition comprises less than 150 wppm of nickel and nickel-containing species, based on the total weight of the molecular sieve catalyst composition.
- 83. The process of claim 49, wherein the molecular sieve catalyst composition comprises less than 1,500 wppm of cobalt and cobalt-containing species, based on the total weight of the molecular sieve catalyst composition.
- 84. The process of claim 83, wherein the molecular sieve catalyst composition comprises less than 100 wppm of cobalt and cobalt-containing species, based on the total weight of the molecular sieve catalyst composition.
- 85. The process of claim 84, wherein the molecular sieve catalyst composition comprises less than 5 wppm of cobalt and cobalt-containing species, based on the total weight of the molecular sieve catalyst composition.
- 86. The process of claim 49, wherein the molecular sieve catalyst composition comprises less than 1,500 wppm of manganese and manganese-containing species, based on the total weight of the molecular sieve catalyst composition.
- 87. The process of claim 86, wherein the molecular sieve catalyst composition comprises less than 300 wppm of manganese and manganese-containing species, based on the total weight of the molecular sieve catalyst composition.
- 88. The process of claim 87, wherein the molecular sieve catalyst composition comprises less than 150 wppm of manganese and manganese-containing species, based on the total weight of the molecular sieve catalyst composition.

- 89. The process of claim 49, wherein the molecular sieve catalyst composition comprises less than 1,500 wppm of vanadium and vanadium-containing species, based on the total weight of the molecular sieve catalyst composition.
- 90. The process of claim 89, wherein the molecular sieve catalyst composition comprises less than 300 wppm of vanadium and vanadium-containing species, based on the total weight of the molecular sieve catalyst composition.
- 91. The process of claim 90, wherein the molecular sieve catalyst composition comprises less than 150 wppm of vanadium and vanadium-containing species, based on the total weight of the molecular sieve catalyst composition.
- 92. A catalyst composition, comprising:
  - (a) a molecular sieve;
  - (b) a matrix material containing less than about 1,500 wppm manganese and manganese-containing species, based on the total weight of the matrix material; and
  - (c) optionally binder.
- 93. The composition of claim 92, wherein the matrix material contains less than about 300 wppm manganese and manganese-containing species, based on the total weight of the matrix material.
- 94. The composition of claim 93, wherein the matrix material contains less than about 150 wppm manganese and manganese-containing species, based on the total weight of the matrix material.

- 95. The composition of claim 92, wherein the matrix material is selected from the group consisting of: kaolin, halloysite, kaolinite, dickite, nacrite, montmorillonite, hectorite, saponite and laponite.
- 96. The composition of claim 92, wherein the catalyst composition has a d<sub>50</sub> particle size from about 20 to about 200 microns.
- 97. The composition of claim 92, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof, and mixtures thereof.
- 98. The composition of claim 97, wherein the molecular sieve is selected from the group consisting of SAPO-34, AEI/CHA intergrowths, the metal containing forms thereof, and mixtures thereof.
- 99. The composition of claim 92, wherein the catalyst composition is a slurry, said catalyst composition further comprising:
  - (d) a slurrying medium.
- 100. A catalyst composition, comprising:
  - (a) a molecular sieve;
  - (b) a matrix material containing less than about 1,500 wppm vanadium and vanadium-containing species, based on the total weight of the matrix material; and
  - (c) optionally binder.
- 101. The composition of claim 100, wherein the matrix material contains less than about 300 wppm vanadium and vanadium-containing species, based on the total weight of the matrix material.

- 102. The composition of claim 101, wherein the matrix material contains less than about 150 wppm vanadium and vanadium-containing species, based on the total weight of the matrix material.
- 103. The composition of claim 100, wherein the matrix material is selected from the group consisting of: kaolin, halloysite, kaolinite, dickite, nacrite, montmorillonite, hectorite, saponite and laponite.
- 104. The composition of claim 100, wherein the catalyst composition has a d<sub>50</sub> particle size from about 20 to about 200 microns.
- 105. The composition of claim 100, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof, and mixtures thereof.
- 106. The composition of claim 105, wherein the molecular sieve is selected from the group consisting of SAPO-34, AEI/CHA intergrowths, the metal containing forms thereof, and mixtures thereof.
- 107. The composition of claim 100, wherein the catalyst composition is a slurry, said catalyst composition further comprising:
  - (d) a slurrying medium.
- 108. A process for forming a molecular sieve catalyst composition, the process comprising the steps of:
  - (a) selecting a matrix material containing less than 1,500 wppm of manganese and manganese-containing species, based on the total weight of the matrix material;

- (b) forming a slurry containing the matrix material, a molecular sieve, a slurrying medium, and optionally a binder; and
- (c) drying the slurry to produce the molecular sieve catalyst composition.
- 109. The process of claim 108, wherein the matrix material contains less than 300 wppm of manganese and manganese-containing species, based on the total weight of the matrix material.
- 110. The process of claim 109, wherein the matrix material contains less than 150 wppm of manganese and manganese-containing species, based on the total weight of the matrix material.
- 111. The process of claim 108, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof, and mixtures thereof.
- 112. A process for forming a molecular sieve catalyst composition, the process comprising the steps of:
  - (a) selecting a matrix material containing less than 1,500 wppm of vanadium and vanadium-containing species, based on the total weight of the matrix material:
  - (b) forming a slurry containing the matrix material, a molecular sieve, a slurrying medium, and optionally a binder; and
  - (c) drying the slurry to produce the molecular sieve catalyst composition.

- 113. The process of claim 112, wherein the matrix material contains less than 300 wppm of vanadium and vanadium-containing species, based on the total weight of the matrix material.
- 114. The process of claim 113, wherein the matrix material contains less than 150 wppm of vanadium and vanadium-containing species, based on the total weight of the matrix material.
- 115. The process of claim 112, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof, and mixtures thereof.
- 116. A catalyst composition, comprising:
  - (a) a molecular sieve;
  - (b) a matrix material; and
  - (c) optionally binder, wherein the catalyst composition contains less than about 10,000 wppm iron and iron-containing species, based on the total weight of the catalyst composition.
- 117. The composition of claim 116, wherein the catalyst composition contains less than about 7,000 wppm iron and iron-containing species, based on the total weight of the catalyst composition.
- 118. The composition of claim 117, wherein the catalyst composition contains less than about 4,000 wppm iron and iron-containing species, based on the total weight of the catalyst composition.

- 119. The composition of claim 116, wherein the matrix material contains less than about 10,000 wppm iron and iron-containing species, based on the total weight of the matrix material.
- 120. The composition of claim 119, wherein the matrix material is selected from the group consisting of: kaolin, halloysite, kaolinite, dickite, nacrite, hectorite and laponite.
- 121. The composition of claim 116, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof and mixtures thereof.
- 122. A catalyst composition, comprising:
  - (a) a molecular sieve;
  - (b) a matrix material; and
  - (c) optionally binder, wherein the catalyst composition contains less than about 15,000 wppm titanium and titanium-containing species, based on the total weight of the catalyst composition.
- 123. The composition of claim 122, wherein the catalyst composition contains less than about 10,000 wppm titanium and titanium-containing species, based on the total weight of the catalyst composition.
- 124. The composition of claim 123, wherein the catalyst composition contains less than about 5,000 wppm titanium and titanium-containing species, based on the total weight of the catalyst composition.

- 125. The composition of claim 122, wherein the matrix material contains less than about 15,000 wppm titanium and titanium-containing species, based on the total weight of the matrix material.
- 126. The composition of claim 125, wherein the matrix material is selected from the group consisting of: kaolin, halloysite, kaolinite, dickite, nacrite, hectorite and laponite.
- 127. The composition of claim 122, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof and mixtures thereof.
- 128. A catalyst composition, comprising:
  - (a) a molecular sieve;
  - (b) a matrix material; and
  - (c) optionally binder, wherein the catalyst composition contains less than about 1,500 wppm nickel and nickel-containing species, based on the total weight of the catalyst composition.
- 129. The composition of claim 128, wherein the catalyst composition contains less than about 300 wppm nickel and nickel-containing species, based on the total weight of the catalyst composition.
- 130. The composition of claim 129, wherein the catalyst composition contains less than about 150 wppm nickel and nickel-containing species, based on the total weight of the catalyst composition.

- 131. The composition of claim 128, wherein the matrix material contains less than about 1,500 wppm nickel and nickel-containing species, based on the total weight of the matrix material.
- 132. The composition of claim 131, wherein the matrix material is selected from the group consisting of: kaolin, halloysite, kaolinite, dickite, nacrite, hectorite and laponite.
- 133. The composition of claim 128, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof and mixtures thereof.
- 134. A catalyst composition, comprising:
  - (a) a molecular sieve;
  - (b) a matrix material; and
  - (c) optionally binder, wherein the catalyst composition contains less than about 1,500 wppm cobalt and cobalt-containing species, based on the total weight of the catalyst composition.
- 135. The composition of claim 134, wherein the catalyst composition contains less than about 100 wppm cobalt and cobalt-containing species, based on the total weight of the catalyst composition.
- 136. The composition of claim 135, wherein the catalyst composition contains less than about 5 wppm cobalt and cobalt-containing species, based on the total weight of the catalyst composition.

- 137. The composition of claim 134, wherein the matrix material contains less than about 1,500 wppm cobalt and cobalt-containing species, based on the total weight of the matrix material.
- 138. The composition of claim 137, wherein the matrix material is selected from the group consisting of: kaolin, halloysite, kaolinite, dickite, nacrite, hectorite and laponite.
- 139. The composition of claim 134, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof and mixtures thereof.
- 140. A catalyst composition, comprising:
  - (a) a molecular sieve;
  - (b) a matrix material; and
  - (c) optionally binder, wherein the catalyst composition contains less than about 1,500 wppm manganese and manganese-containing species, based on the total weight of the catalyst composition.
- 141. The composition of claim 140, wherein the catalyst composition contains less than about 300 wppm manganese and manganese-containing species, based on the total weight of the catalyst composition.
- 142. The composition of claim 141, wherein the catalyst composition contains less than about 150 wppm manganese and manganese-containing species, based on the total weight of the catalyst composition.

- 143. The composition of claim 140, wherein the matrix material contains less than about 1,500 wppm manganese and manganese-containing species, based on the total weight of the matrix material.
- 144. The composition of claim 143, wherein the matrix material is selected from the group consisting of: kaolin, halloysite, kaolinite, dickite, nacrite, hectorite and laponite.
- 145. The composition of claim 140, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof and mixtures thereof.
- 146. A catalyst composition, comprising:
  - (a) a molecular sieve;
  - (b) a matrix material; and
  - (c) optionally binder, wherein the catalyst composition contains less than about 1,500 wppm vanadium and vanadium-containing species, based on the total weight of the catalyst composition.
- 147. The composition of claim 146, wherein the catalyst composition contains less than about 300 wppm vanadium and vanadium-containing species, based on the total weight of the catalyst composition.
- 148. The composition of claim 147, wherein the catalyst composition contains less than about 150 wppm vanadium and vanadium-containing species, based on the total weight of the catalyst composition.

- 149. The composition of claim 146, wherein the matrix material contains less than about 1,500 wppm vanadium and vanadium-containing species, based on the total weight of the matrix material.
- 150. The composition of claim 149, wherein the matrix material is selected from the group consisting of: kaolin, halloysite, kaolinite, dickite, nacrite, hectorite and laponite.
- 151. The composition of claim 146, wherein the molecular sieve is selected from the group consisting of SAPO-5, SAPO-8, SAPO-11, SAPO-16, SAPO-17, SAPO-18, SAPO-20, SAPO-31, SAPO-34, SAPO-35, SAPO-36, SAPO-37, SAPO-40, SAPO-41, SAPO-42, SAPO-44, SAPO-47, SAPO-56, AEI/CHA intergrowths, metal containing forms thereof, intergrown forms thereof and mixtures thereof.
